GISsurfer has been upgraded to version 2.0. You can now surf GIS data almost as easily as you surf the internet.
For details see p. 2 below.

This PDF report is online at https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.pdf and contains 3,500+ addresses for USA-based ArcGIS servers. If you have previously downloaded this report then you can check the above link to make sure you still have the most recent version. If you prefer a txt version of this report instead of PDF, you can find it at https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.txt

Everyone is welcome to share/post this list anywhere. When doing so please give credit to Joseph Elfelt - MappingSupport.com (https://mappingsupport.com).

@ArcGIS server administrators: Thank you to those who have converted from http to https. However, too many of you have not yet made this conversion. Do you know that SSL certificates from https://letsencrypt.org/ cost nothing? And there is a second group of you that has attempted to convert to https but either have not done so correctly or are using SSL certificates that the browsers do not trust or that have expired. Those servers are flagged in this report as having an SSL problem. If you would please get new SSL certificates from LetsEncrypt, then this problem will go away. To test your https implementation, try browsing to your “rest/services” address and see if an error message appears.

List of Federal GIS Servers and State GIS Servers and County GIS Servers and City GIS Servers

Any Dead Links Are Fixed or Flagged

By Joseph Elfelt, https://mappingsupport.com

See a mistake? Have relevant information to share? Please send me an email via this contact page: https://mappingsupport.com/p2/gissurfer-about-contact.html
This report promotes public access to government data by publishing ArcGIS server addresses. County and city GIS servers are included in this report with the hope that students in middle school and high school will use those local resources to help them learn about and explore geospatial data for their own backyard. As explained below, most of these server addresses were found with simple Google searches.

**See any mistakes?** Some of the servers in this list have multiple jurisdictions and from one entry to the next they jump between states/counties/cities. No doubt I became mesmerized a time or two by the repetition involved and entered some server addresses under the wrong state. Or I may have entered a city server’s address in the section for county servers or vice versa. I cannot fix it unless someone tells me I goofed.

**Why am I doing this?** I am a software developer in the field of online maps. One of my projects is GISsurfer which is a general purpose web map based on the free open-source Leaflet map API (Application Program Interface). One of the features of GISsurfer is the ability to display *any* public-facing (i.e. no login required) ArcGIS MapServer, ImageServer and FeatureServer data. If you would like to give this a try:

2. Zoom in on a state, county or city where you would like to see some GIS data.
3. Click the basemap button and change the basemap to “USA basemap”.
4. Click the basemap button again and look under the “Overlay” heading (mobile users might need to scroll down). Select “Add GIS overlays”.
5. Use this list to copy the address for an ArcGIS server for that state, county or city and then paste that address into the GISsurfer dialog box.
6. Click “Send request to GIS server”. After a few seconds, the sidebar will open and display the top of the table of contents for that GIS server.
7. Click an entry in the table of contents to go down to the next level.
8. An entry with a checkbox can be displayed on the map as an overlay. **Click that entry to add that GIS data to the map as an overlay.** Click it again to delete that overlay from the map.
For more information please visit the **GISsurfer homepage**. Click the green “Menu” button and then select “Help”.

**Automated weekly scan:** Once a week my code automatically tests each link in this report. Each link is tested at least 3 times spread over a 24 hour period. Bad links will promptly be fixed or flagged. Addresses in this report that are flagged “dead link” are not clickable. No doubt in many cases that government entity still has an ArcGIS server but has simply changed the address and/or configured their server for internal use only. Every couple of months or so I will check the jurisdictions that are flagged “dead link”. In many cases I will be able to find a new ArcGIS server address to add to this list. If you find out any new ArcGIS server addresses, please let me know.

Each GIS server link will also be tested to detect (1) if directory services (i.e. table of contents) has been disabled and (2) whether login credentials are required. This automated weekly code will also test each http link to see if there is now a https version. This report will be updated with any such new information.

Usually an updated list will be posted Wednesday morning.

**Tip:** Sometimes a link that is flagged as ‘dead’ is only down temporarily. If you think such a link might have data you would like to see, you can always replace the leading underline character with the letter “h” and give the link a try.

**Tip:** If you are looking for a certain type of data, try a Google advanced search. For example, if you are looking for trail data then search on:

trails site:___________

Replace the underline with the address for an ArcGIS server and enter that search into a browser bar.

**Why are the multiple entries for some counties/cities?** The focus of this list is to present links that go directly to data for a state agency or county or city/town/village. Some of the servers on this list have data for multiple jurisdictions. It would have been nice if the server administrator had made a folder for each jurisdiction and then put all the data for that jurisdiction into that folder. Unfortunately, sometimes that did not happen.

**Data ‘Portals’:** Yes, this report does include some addresses for federal and state data portals. No, publishing portal addresses is not the primary purpose of this report.

**Want to help #1?** If you know of a federal, state, regional, county or city **ArcGIS server** that is not already listed below and that includes at least some data where no login credentials are required, please send me an email via the contact link posted above. **Note that I am only looking for the ‘top’ endpoint for ArcGIS servers. Those links all end in “rest/services”**. I would particularly like to get addresses for more ArcGIS servers operated by regional planning bodies.
Want to help #2? Each state has a section for links to county ArcGIS servers and then a section for links to city ArcGIS servers. Find your state and see if it looks like I listed any city servers in the county section or vice versa.

Want to help #3? Some counties and cities have agreed to cooperate and have data layers for both jurisdictions on a single server. When that happens I want to show both the city name and county name in this list along with a pointer to whichever one is hosting the combined data. If you know of any such ArcGIS servers, please send me an email via my contact page. Go to https://mappingsupport.com, click the big green “Menu” button and select “About and contact”.

Want to help #4? See the section “USA Miscellaneous Servers” near the start of the list. If you can identify any of those links as primarily having data for one state or one county or one city, please let me know and I will move that server link to the appropriate location.

Caution: Some of the GIS data on these servers will be draft and/or temporary. Also the server administrators sometimes renumber the data layers with little to no warning. This will break any maps that are based on the former layer numbers. Another common problem is the use of gibberish names to identify data folders/layers/attributes combined with the lack of metadata to translate that gibberish into something useful. And when you want to ask a question about the data usually the GIS server metadata lacks any contact information.

Anyone can easily search for ArcGIS servers. Assume you want to know if St. Louis County Minnesota (County seat is Duluth) has a public-facing ArcGIS server. First, find the county website. Note that the website address includes “stlouiscountymn”. Second, do a Google search on: stlouiscountymn “rest/services”. Include the quotes in your search. If this county has a GIS server then you will likely see search hits to various places within the table of contents. Open any table of contents page and then in the upper left corner click on “Home”. You now will see the ‘top’ of the table of contents for this ArcGIS server and the browser address bar will display an address that ends in “/rest/services”.

Of course at the county and city level you could simply call or email the GIS staff and ask. Here is one way to phrase the question: “Do you have a public-facing ArcGIS server and, if so, what is the rest service endpoint?”

Sometimes you might see two server addresses that appear identical except one of them says “arcgis” and the other says “ArcGIS”. Technically these are different internet addresses and these two servers may or may not contain the same information.

Tip: If you are interested in a topic instead of a state/county/city then try a Google search like this example: "climate change" "rest/services". Include keywords for your topic and always include rest/services in quotes. Many of the hits that are returned will point you to ArcGIS layers.

Data.gov and GeoPlatform: These two websites can also help you find federal GIS servers. Enter your search criteria and then in the left sidebar find the “Format” section and select “ESRI Rest”. The hits will be for ArcGIS layers. In other words, these two sites index the ‘bottom’ of
a GIS server table of contents. By contrast, this PDF report shows you the ‘top’ of the table of contents for GIS servers. One advantage of these two sites is that you may find metadata that is not present when you look at the GIS server page for the same data. **Caution:** Many (most?) of the GIS layers on the various federal servers have **not** been submitted by the server administrators for inclusion on data.gov or geoplatform.

**GeoSeer** is a search engine for finding data served through WMS, WFS, WCS, and WMTS services. It allows users to easily find publicly available datasets which they can then use in their own projects using normal GIS tools. At the time of writing GeoSeer has over 1.2 million distinct spatial layers in its index from over 160,000 services. This is a worldwide search tool. **Note:** GeoSeer does not index ArcGIS ESRI Rest data (the ArcGIS Server default). It only indexes data that are available via any of the four standards listed above - all of which ArcGIS Server is capable of serving - but none of which are the default.

**http v. https:** If you find a GIS server that is not on this list and that starts with http:// then change the link to https:// and see if that works. If so then you should use the https version of the server link.

**Table of contents disabled:** This comment by a server address means that the server administrator has turned off the table of contents. If you click that link then the server will display an error message that says **“Services Directory has been disabled.”** Even if a server does in fact have a few data layers that truly are sensitive and should not be available to the public, that is not a good reason for turning off the entire table of contents. There is nothing sensitive about the location of parks, fire stations, roads and the vast majority of other data that is hosted on GIS servers.

**Login required v. public-facing:** A small number a ArcGIS servers on this list require a login in order to access any data. That type of restriction is noted in the list. Fortunately the great majority of government GIS servers are public-facing - i.e. no login is required.

**Are you looking for maps instead of just data?** I expect that most government entities that have a GIS server also have produced some maps anyone can look at. Just go to the website for that city, county or other government entity and search their site for maps. If that does not work then you might look for a link to the GIS or planning department. Maps that are produced by GIS staff often include explanations about the data along with supporting information such as a contact link for questions.

**Are you a GIS server administrator?**

**First,** hopefully you are in favor of **public access to data** and will not take any action to make it hard/impossible for people to view the data your server is hosting. And if you have disabled the ‘services directory’ (i.e. table of contents) please consider turning that back on. Yes, if you allow the public to browse the services directory there is at least a theoretical security risk in the form of cross site scripting attacks (XSS). But if this was actually a significant threat then it would be a common practice for server administrators to disable the services directory and that is simply not happening.
Second, if your server is still using http then notice that the great majority of servers in this report are using https. This is in keeping with the philosophy promoted by Google and others to ‘encrypt everything’. You can get free SSL certificates from https://letsencrypt.org/. I use this service for the domains that I own.

Third, if you make a significant change to your server that affects (for better or worse) the public’s ability to view the data on your server, please send me an email and I will update this list.

Fourth, are you using gibberish for the names of the folders, services, layers and attribute data on your server? Are you using names like PG instead of Playgrounds? What good public purpose is served by obfuscating the data your server is hosting by using gibberish names instead of plain-speak? ESRI does not charge by the letter!

Fifth, is there data on your server that might endanger public safety if that data was publicly available? If so, then consider placing that data in a folder that requires login credentials. By doing that, most of the data on the server could continue to be publically available while the truly sensitive data would be protected behind a login requirement.

Credits
Thanks to Jonathan at GeoSeer (https://www.geoseer.net/) for sharing over 200(!) ArcGIS server addresses. The GeoSeer site is a great complement to this list of server addresses. GeoSeer indexes individual GIS data layers and provides a way for anyone to freely search their database for GIS data. GeoSeer builds its database with code that scans GIS servers that are based on WMS, WMTS, WFS, WCS and ArcGIS.

Thanks also to everyone else that has sent me addresses for ArcGIS REST services. All things considered, I decided that the best course of action is to not credit anyone by name unless you give me permission to do so. So if you contributed and would like to be credited, please drop me an email via my contact page: https://mappingsupport.com/p2/gissurfer-about-contact.html
1. **Donate to help fund this work**

The report you are looking at has taken days and days of effort to compile. Time is spent each week to maintain and update the list. And there certainly are additional government ArcGIS servers waiting to be discovered and added to this list. If you find this list of server addresses to be useful please consider making a donation to help fund this work.

If you know of any **grant programs** that might be interested in funding this work, please use the ‘contact’ link at the top of this report and send me that information.

Here is a link for the GISsurfer donate page. You can always include a short note indicating that you are donating to help fund the ArcGIS server list.

2. **COVID-19 GIS layers covering the USA**

These are the ArcGIS MapServer and FeatureServer layers I have found that (1) are COVID-19 related and (2) cover the USA. If you know of any other MapServer and FeatureServer layers that **meet both criteria** please share them with me and I will include them here.

You can see these layers in the COVID-19 map I produce. If you need help using this map or are looking for the legend, please click “Map tips” in the upper left corner.

**Open GISsurfer COVID-19 map:**

**COVID-19 cases and deaths by county**

Data covers the USA. Curated by Johns Hopkins University.

Florida County GIS Servers

As of 1-1-2020 all Florida counties have been checked for a public-facing GIS server. All counties not listed below fall into one of the following categories.

1. County GIS is hosted on some other kind of GIS server (not ArcGIS and not WMS) that cannot be accessed directly by GISsurfer.
2. County has no GIS.

Alachua  https://gis.alachuacounty.us/arcgis/rest/services

Michigan County GIS Servers
As of 12-30-2019 all Michigan counties have been checked for a public-facing GIS server. All counties not listed below fall into one of the following categories.
1. County GIS is hosted on a WMS server that is hidden behind a proxy and therefore cannot be accessed directly by GISsurfer.
2. County GIS is hosted on some other kind of GIS server that cannot be accessed directly by GISsurfer. Most of these have just a few layers of data which are related to parcels.
3. County has no GIS.

Table of contents disabled
Special note: Unfortunately the ArcGIS servers at gisworkshop.com do *not* use a folder for each county. As a result, the top of the table of contents for these servers have multiple entries for many Nebraska counties. Initially I began showing each of those entries in this list. Then I decided that was getting ridiculous and I decided to just show a link to the top of the table of contents for these servers and remind the user to scroll down for the links to each county. This company has two REST service endpoints. They are shown below along with a list of the counties with data on each server.

https://gis3.gisworkshop.com/arcgis/rest/services
The above server has data for the following counties. If you open the above link you can scroll down to the county of interest.

Antelope
Arthur
Banner
Blaine
Boone
Box
Boyd
Brown
Buffalo
Burt
Butler
Cass
Cedar
Chase
Cherry
Cheyenne
Clay
Colfax
Cuming
Custer
Dakota
Dawes
Dawson
Deuel
Dixon
Dodge
Dundy
Fillmore
Franklin
Frontier
Furnas
Gage
Garden
Garfield
Gosper
Grant
Greeley
Hamilton
Harlan
Hayes
Hitchcock
Hooker
Howard

Wisconsin County GIS Servers

As of 12-30-2019 all Wisconsin counties have been checked for a public-facing GIS server. All counties not listed below fall into one of the following categories.
1. County ArcGIS server is not public-facing. Login credentials are required.
2. County GIS is hosted on some other kind of GIS server (not ArcGIS and not WMS) that cannot be accessed directly by GISsurfer.
3. County has no GIS.

Some counties that do not have an ArcGIS server do have a WMS server. However, usually those WMS servers just have a few data layers and most of those layers are aerial photos.

Adams  https://services5.arcgis.com/cmcEK45KcVMmaCd7/arcgis/rest/services
Barron  https://ags1.wgxtreme.com/arcgis/rest/services/BarronCoWI
Bayfield  https://maps.bayfieldcounty.org/ArcGIS/rest/services
Bayfield  https://maps.bayfieldcounty.org/arcgis/rest/services
Brown  https://gis.co.brown.wi.us/arcgis/rest/services
Buffalo  WMS server.
Burnett  https://ags1.wgxtreme.com/arcgis/rest/services/BurnettCoWI
Calumet  https://ags1.wgxtreme.com/arcgis/rest/services/CalumetCoWI
Chippewa  WMS server.
Clark  WMS server.
Columbia  https://lrs.co.columbia.wi.us/server/rest/services
Crawford  WMS server.
