You can now ‘surf’ the data on any of these GIS servers using the *beta* version of GISsurfer v2.0. No GIS savvy required! Display *any* public-facing ArcGIS server’s table of contents on the left side of your screen and the GISsurfer map on the right side. Click layer - See data.

Here is a webpage with a link to the beta code and tips to get you started.

https://mappingsupport.com/p2/gissurfer-beta.html

This PDF report is online at https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.pdf and contains **over 1,800 addresses** for USA-based ArcGIS servers. If you have previously downloaded this report then you can check the above link to make sure you still have the most recent version. If you prefer a txt version of this report instead of PDF, you can find it at https://mappingsupport.com/p/surf_gis/list-federal-state-county-city-GIS-servers.txt

Everyone is welcome to share/post this list anywhere. When doing so please give credit to Joseph Elfelt - MappingSupport.com (https://mappingsupport.com).

List of 50+ Federal GIS Servers
and 150+ State GIS Servers
and 200+ County GIS Servers
and 200+ City GIS Servers
and **No Dead Links**

This report promotes public access to government data by publishing ArcGIS server addresses. County and city GIS servers are included in this report with the hope that students in middle school and high school will use those local resources to help them learn about and explore geospatial data for their own backyard. As explained below, most of these server addresses were found with simple Google searches.

**Why am I doing this?** I am a software developer in the field of online maps. One of my projects is **GISsurfer** which is a general purpose web map based on the free open-source Leaflet map API (Application Program Interface). One of the features of GISsurfer is the ability to display *any* public-facing (i.e. no login required) ArcGIS MapServer, ImageServer and FeatureServer data. To see example maps:

2. Click Menu ==> GISsurfer special maps
3. Scroll down to the map links
4. For the legend and ‘help’, click “Map tips” in the upper left corner of any map.

In the summer of 2019 a feature will be added to GISsurfer that will let the user split the screen. The left side of the screen can display the table of contents of any public-facing ArcGIS server. The right side of the screen will display the map. **Click a layer name in the table of contents and that data will appear on the map.** There will be two ways to save the map you make. User’s will be able to use this list to find servers they might like to surf. To try this feature using the **beta version of GISsurfer v2.0**, see the link at the very top of this report.

**Automated weekly scan:** Once a week my code automatically tests each link in this report. Each link is tested at least 3 times spread over a 24 hour period. Bad links will promptly be fixed or flagged. Addresses in this report that are flagged “dead link” are not clickable. No doubt in many cases that government entity still has an ArcGIS server but has simply changed the address and/or configured their server for internal use only. If you find out any new ArcGIS server addresses, please let me know.

Each GIS server link will also be tested to detect (1) if directory services (i.e. table of contents) has been disabled and (2) whether login credentials are required. This automated weekly code will also test each http link to see if there is now a https version. This report will be updated with any such new information.

Usually an updated list will be posted no later than Wednesday morning.

**Data ‘Portals’:** Yes, this report does include some addresses for federal and state data portals. No, publishing portal addresses is not the primary purpose of this report.

**Want to help get this list to 2,000 ArcGIS server addresses?** If you know of a federal, state, regional, county or city **ArcGIS server** that is not already listed below and that includes at least some data where no login credentials are required, please send me an email via the contact link posted above. **Note that I am only looking for the ‘top’ endpoint for ArcGIS servers. Those links all end in “rest/services”**. I would particularly like to get addresses for more ArcGIS servers operated by regional planning bodies.
Caution: Some of the GIS data on these servers will be draft and/or temporary. Also the server administrators sometimes renumber the data layers with little to no warning. This will break any maps that are based on the former layer numbers. Another common problem is the use of gibberish names to identify data folders/layers/attributes combined with the lack of metadata to translate that gibberish into something useful. And when you want to ask a question about the data usually the GIS server metadata lacks any contact information.

Anyone can easily search for ArcGIS servers. Assume you want to know if St. Louis County Minnesota (County seat is Duluth) has a public-facing ArcGIS server. First, find the county website. Note that the website address includes “stlouiscountymn”. Second, do a Google search on: stlouiscountymn “rest/services”. Include the quotes in your search. If this county has a GIS server then you will likely see search hits to various places within the table of contents. Open any table of contents page and then in the upper left corner click on “Home”. You now will see the ‘top’ of the table of contents for this ArcGIS server and the browser address bar will display an address that ends in “/rest/services”.

Of course at the county and city level you could simply call or email the GIS staff and ask. Here is one way to phrase the question: “Do you have a public-facing ArcGIS server and, if so, what is the rest service endpoint?”

Sometimes you might see two server addresses that appear identical except one of them says “arcgis” and the other says “ArcGIS”. Technically these are different internet addresses and these two servers may or may not contain the same information.

Tip: If you are interested in a topic instead of a state/county/city then try a Google search like this example: "climate change" "rest/services". Include keywords for your topic and always include rest/services in quotes. Many of the hits that are returned will point you to ArcGIS layers.

Data.gov and GeoPlatform: These two websites can also help you find federal GIS servers. Enter your search criteria and then in the left sidebar find the “Format” section and select “ESRI Rest”. The hits will be for ArcGIS layers. In other words, these two sites index the ‘bottom’ of a GIS server table of contents. By contrast, this PDF report shows you the ‘top’ of the table of contents for GIS servers. One advantage of these two sites is that you may find metadata that is not present when you look at the GIS server page for the same data. Caution: Many (most?) of the GIS layers on the various federal servers have not been submitted by the server administrators for inclusion on data.gov or geoplatform.

GeoSeer is a search engine for finding data served through WMS, WFS, WCS, and WMTS services. It allows users to easily find publicly available datasets which they can then use in their own projects using normal GIS tools. At the time of writing GeoSeer has over 1.2 million distinct spatial layers in its index from over 160,000 services. This is a worldwide search tool. Note: GeoSeer does not index ArcGIS ESRI Rest data (the ArcGIS Server default). It only indexes data that are available via any of the four standards listed above - all of which ArcGIS Server is capable of serving - but none of which are the default.
http v. https: If you find a GIS server that is not on this list and that starts with http:// then change the link to https:// and see if that works. If so then you should use the https version of the server link.

Table of contents disabled: This comment by a server address means that the server administrator has turned off the table of contents. If you click that link then the server will display an error message that says “Services Directory has been disabled.” Even if a server does in fact have a few data layers that truly are sensitive and should not be available to the public, that is not a good reason for turning off the entire table of contents. There is nothing sensitive about the location of parks, fire stations, roads and the vast majority of other data that is hosted on GIS servers.

Login required v. public-facing: A small number a ArcGIS servers on this list require a login in order to access any data. That type of restriction is noted in the list. Fortunately the great majority of government GIS servers are public-facing - i.e. no login is required.

Are you looking for maps instead of just data? I expect that most government entities that have a GIS server also have produced some maps anyone can look at. Just go to the website for that city, county or other government entity and search their site for maps. If that does not work then you might look for a link to the GIS or planning department. Maps that are produced by GIS staff often include explanations about the data along with supporting information such as a contact link for questions.

Are you a GIS server administrator?

First, hopefully you are in favor of public access to data and will not take any action to make it hard/impossible for people to view the data your server is hosting. And if you have disabled the ‘services directory’ (i.e. table of contents) please consider turning that back on. Yes, if you allow the public to browse the services directory there is at least a theoretical security risk in the form of cross site scripting attacks (XSS). But if this was actually a significant threat then it would be a common practice for server administrators to disable the services directory and that is simply not happening.

Second, if your server is still using http then notice that the great majority of servers in this report are using https. This is in keeping with the philosophy promoted by Google and others to ‘encrypt everything’. You can get free SSL certificates from https://letsencrypt.org/. I use this service for the domains that I own.

Third, if you make a significant change to your server that affects (for better or worse) the public’s ability to view the data on your server, please send me an email and I will update this list.

Fourth, are you using gibberish for the names of the folders, services, layers and attribute data on your server? Are you using names like PG instead of Playgrounds? What good public purpose is served by obfuscating the data your server is hosting by using gibberish names instead of plain-speak? ESRI does not charge by the letter!
Credits
Thanks to Jonathan at GeoSeer (https://www.geoseer.net/) for sharing over 200(!) ArcGIS server addresses. The GeoSeer site is a great complement to this list of server addresses. GeoSeer indexes individual GIS data layers and provides a way for anyone to freely search their database for GIS data. GeoSeer builds its database with code that scans GIS servers that are based on WMS, WMTS, WFS, WCS and ArcGIS.

Thanks also to everyone else that has sent me addresses for ArcGIS REST services. All things considered, I decided that the best course of action is to not credit anyone by name unless you give me permission to do so. So if you contributed and would like to be credited, please drop me an email via my contact page: https://mappingsupport.com/p/ms_contact_about.html
1. **Donate to help fund this work**

The report you are looking at has taken days and days of effort to compile. And there certainly are additional government ArcGIS servers waiting to be discovered and added to this list. If you find this list of server addresses to be useful please consider making a donation to help fund this work.

Here is a link for the GISsurfer donate page. You can always include a short note indicating that you are donating to help fund the ArcGIS server list.

GIS: https://elevation.nationalmap.gov/arcgis/rest/services
GIS: https://smallscale.nationalmap.gov/arcgis/rest/services

Here are two non-government data sources that are also used on the national map
GIS: https://services.arcgisonline.com/arcgis/rest/services/USA_Topo_Maps/MapServer
U.S. National Grid (USNG).

USGS - Coastal and Marine Geology Program
GIS: _https://coastalmap.marine.usgs.gov/cmgp/rest/services Dead link

USGS - Land Treatments Digital Library
Website: https://ltdl.wr.usgs.gov
GIS: https://ltdl.wr.usgs.gov/gis/rest/services

USGS - Snake River Field Station
Website: https://srf.s.wr.usgs.gov
GIS: https://srf.s.wr.usgs.gov/arcgis/rest/services

USGS - Earthquake and landslide
Website: https://earthquake.usgs.gov/
Website: https://landslides.usgs.gov/
GIS: https://earthquake.usgs.gov/arcgis/rest/services
USGS - Wildland fire
Website: https://www.usgs.gov/science/mission-areas/natural-hazards/wildfire-hazards
GIS: https://wildfire.cr.usgs.gov/arcgis/rest/services
The above server hosts the GeoMAC wildland fire data at:
https://wildfire.cr.usgs.gov/arcgis/rest/services/geomac_dyn/MapServer
Caution #1. Compared to the data hosted by GeoMAC, there often is more recent fire data available from the NIFC FTP server and from NASA via WMS or file download. See:
https://ftp.nifc.gov/
https://earthdata.nasa.gov/earth-observation-data/near-real-time/firms/active-fire-data
Caution #2. Near the start of each year some of the layer numbers on the GeoMAC ArcGIS server are changed. This breaks all maps that used the previous layer numbers! Currently a new layer 10 is created for the prior year’s fires. All layer numbers after layer 10 are increased by 1. If you make a map that uses any GeoMAC layers after layer 10, then each year you will need to tweak your map to adjust the layer numbers.

GIS: https://rmgsc.cr.usgs.gov/arcgis/rest/services
Above server has the same data as the ‘wildfire’ server.
