## National Park GIS Trail Maps

By: Joseph Elfelt, [contact](#)

This PDF file is online at  
<https://mappingsupport.com/p2/help/GISsurfer-national-park-gis-trail-maps.pdf>

Below you will find links that will display an **interactive GIS trail map for each national park**. In addition to highlighting the trails, each map has 20+ other GIS layers that you can turn on/off and restack. All of this authoritative data is hosted on federal GIS (Geographic Information System) servers. Want to know where the picnic areas are located or check current weather? These maps let you do that and much more.

The maps are displayed by **GISsurfer** (<https://gissurfer.com>) which is a general purpose web with broad support for displaying data hosted on various kinds of geographic information system (GIS) servers. For a list of **video and PDF tutorials** see <https://mappingsupport.com/p2/gissurfer-help.html>.

Each map has a **“Map tips” link** in the upper left corner. If you would like to get the most benefit from the map, please read these tips. Among other things you will learn how to:

- Turn geolocation on
- Make contour lines easier to see
- Make your own custom map link
- **Display the USGS 1:24,000 topographic maps**
- Get attribute data for the ‘top’ GIS layer
- and more...

Be patient. Sometimes it may take a few seconds for GIS data to appear on the map. It all depends on how much other work the GIS servers are trying to do at the same time. The speed of your internet connection is also a factor.

Everyone is welcome to share and repost these map links. There is no need to ask first. Please follow these simple rules:

1. Encourage your readers to click the “Map Tips” link in the upper left corner of any map so they can learn how to get the most benefit from the map.
2. Include in your post a credit thanking <https://mappingsupport.com>.
3. If you are news media or a government agency, please use the ‘Contact’ link near the top of this page to send me a link to where you are using the map. I enjoy knowing where these maps are being used.
4. Unless you are news media, do not use these map links for any commercial purpose.

You can also find this list of map links online at <https://mappingsupport.com/p2/gissurfer-national-park-gis-trail-maps.html>

**Special mention:** If you would like to see static (i.e. not interactive) maps for national parks then check out <http://npmaps.com>. That website is maintained by a volunteer and hosts a massive amount of jpg, gif and pdf maps for all national parks.

**Tip:** To see the full link for any map, open the map and then click **Menu ==> Link to this map**.
